

BelieversFlow

Christian Task Manager & Spiritual Growth Platform

Technical Pitch · Version 3.1.0 · June 2026

React 19 · FastAPI · GROQ AI · Capacitor 8 · PWA

The Problem

Christians juggle 5+ separate apps for Bible, prayer, tasks, hymns, journaling, and devotionals.

No unified view of spiritual health.

Privacy concerns with cloud-based faith data.

Prayer discipline impossible to track manually.

Disconnected Bible plans and daily task management.

Limited access to personalized spiritual guidance.

Tasks

Diary

Hymns

Bible

Daily Devotional

Prayer Tracker

"I wish I had one app for my whole faith journey."

Our Solution

One app. All of your faith journey.

- 📅 Task Management — Organize daily life with categories & priorities
- 🌟 Spiritual Dashboard — Prayer tracker, streak counter, study plans
- 📖 Spiritual Diary — Mood-tracked journaling with CRUD
- 📖 Bible Reader — 66 books, 12 translations, chapter navigation
- 🎵 Hymn Book — 1,001 hymns, audio playback, search & sort
- 🙏 Daily Devotional — 365 pre-loaded devotionals
- 🤖 AI Faith Assistant — GROQ-powered chat & Bible study tools
- ⚙️ Settings — 5 themes, dark/light mode, data export/import

AI Faith Assistant

Bible Reader (Desktop)

Settings & Theming

User Experience

Clean, intuitive, offline-first. Works everywhere.

Settings

Architecture

Simple, scalable, offline by default.

BelieversFlow Architecture

Frontend · Backend · APIs · Storage

Key: Offline-first architecture. All core features work without internet. AI features gracefully degrade.

Technology Stack

Frontend

React 19 · Vite 8 + Rolldown
Web Audio API (hymn playback)
CSS Custom Properties (theming)
HTML5 Drag & Drop (nav tabs)
Workbox 6 PWA (service worker)

Backend

Python + FastAPI 0.115 (358 loc)
GROQ (llama-3.3-70b-versatile)
httpx async client
Pydantic validation
Vercel Python Serverless

Infrastructure

Vercel (CDN + Serverless)
GitHub Actions (CI/CD)
GitHub Releases (APK)
Capacitor 8 (Android)
Zero server cost (offline-first)

Bundle & Build Statistics

JS Bundle: 987 KB (gzip 196 KB) | CSS: 76 KB (gzip 12.5 KB) | Hymn audio chunk: 10.5 KB
Total source: ~6,500 lines across 18 files | App.jsx: 1,932 lines (single component)
Data: 1,001 hymns (408 KB) + 365 devotionals (315 KB) — dynamically imported on-demand
PWA: 16 precached entries (1.47 MB) | APK: 3.89 MB | Build time: ~300 ms
6 total npm dependencies (production) | Zero third-party UI libraries

Technical Execution

Key challenges we solved.

Web Audio Autoplay

Browsers block AudioContext without gesture. Solution: lazy init on first user tap, AudioContext.resume() for suspended state.

1,001 Hymns (408 KB)

Massive data without bloating initial load. Solution: dynamic import() splits into separate chunk, loaded only when user visits Hymns view.

Non-KJV Bible Texts

Third-party APIs return 404 for ESV, NIV, NLT. Solution: GROQ generates on-demand, cached in localStorage for repeat reads.

Draggable Nav Tabs

Reorderable tabs without drag library. Solution: HTML5 DnD + touch events, persisted to localStorage (btf_navOrder).

TDZ Bug (Rolldown)

Minifier created bad variable ordering. Solution: dynamic await import() for data files, monolithic build (no code splitting).

Solution Quality

Privacy, performance, and reliability built in.

Data Flow

All data stored locally in browser localStorage (16 btf_* keys)
Zero server-side database — no infrastructure cost
Instant reads — no network latency for core operations
Auto-synced via React useEffect hooks (20+ sync hooks)
Bible text cached in localStorage (btf_bible_{v}_{b}_{c})
Service worker runtime caching: 7-day TTL for Bible API
Undo support: 6-second timeout for delete recovery

Security & Privacy

No user accounts — no passwords, no sessions, no tokens
All spiritual data stays on the device (localStorage)
No data transmitted for core features (offline)
AI chat sent to GROQ via backend proxy (HTTPS)
CORS: wildcard for dev flexibility
Service worker runs in isolated context
No eval() — pre-compiled, minified, hashed bundles

Error Resilience

ErrorBoundary (React class component) — wraps entire App, catches render crashes gracefully
Try Again button: resets error state | Reset App Data: clears localStorage + reloads
try/catch on all API calls (GROQ, Bible API, backend) — graceful degradation when offline
localStorage reads wrapped in try/catch for quota errors | Null checks on all external data

Business Viability

Zero Server Cost

No cloud database needed
All user data is local
No hosting for core features
Only AI calls incur cost
Currently: ~\$0/month operating

Market Fit

2.6B Christians worldwide
No unified Christian productivity app
Privacy-sensitive target audience
Offline-first critical in developing markets
Existing apps are single-purpose

Monetization Plan

Core app: free forever
v4.0: Cloud sync (\$)
v5.0: Premium AI tier (\$)
v5.0: Community features (\$)
Cross-platform = wide reach

By The Numbers

1,001 hymns · 365 devotionals · 66 Bible books · 12 translations · 5 themes · 18 timezones
6,500+ lines of source code · 987 KB JS bundle (196 KB gzip) · 3.89 MB APK
Zero server dependencies for core features · ~300 ms build time · Instantly installable PWA
Live web app: believers-flow-frontend.vercel.app · APK: [GitHub Releases](#) · Code: [GitHub](#)

Results & Impact

KJV to WEB

5

Themes

+ dark/light mode

7

Feature Views

all in single SPA

What this means for users

Replaces 5+ separate apps with one unified platform · Zero learning curve — familiar task-based interface

100% offline capable — works anywhere, anytime · Privacy by design — no accounts, no tracking

Instant install as PWA (no app store) · Android APK available for native experience

Lifetime content — never runs out of hymns or devotionals · AI guidance 24/7 without subscription

Roadmap

What's next for BelieversFlow.

v3.2 — Now (Q3 2026)

- CI/CD automation (GitHub Actions)
- 100+ hymn tunes (currently 26)
- iOS build (requires macOS)
- Automated test suite (Playwright)

v4.0 — Next (Q4 2026)

- Cloud sync (optional, paid)
- Hebrew/Greek interlinear Bible
- Reading plans (30/60/90 day)
- Group prayer circles

v5.0 — Future (2027)

- Native iOS (Swift)
- AI sermon notes & transcription
- Church directory integration
- Community features & premium tier

Onboarding (already shipped)

AI Chat (already shipped)

Monetization starts

Cloud sync in v4.0

Why BelieversFlow

Problem Fit

Directly solves a real pain point — Christians managing 5+ disconnected apps. No competitor offers this unified experience.

Technical Excellence

Zero-dependency SPA, offline-first architecture, sub-second builds, 987 KB bundle. Built with modern tools without bloat.

Privacy by Design

No accounts, no cloud storage, no tracking. All data stays on device. This is a feature, not a limitation.

Sustainable Model

Near-zero operating cost. Core features are free. Monetization through optional premium features users will genuinely want.

Global Reach

PWA installable on any device. Android APK for developing markets. 18 timezones. Offline-capable — works everywhere.

AI-Enhanced

GROQ-powered spiritual guidance available 24/7. Bible study tools, commentary, concordance — all AI-driven without subscription.

Thank You
